LEADERSHIP ROLES AND PIPELINE

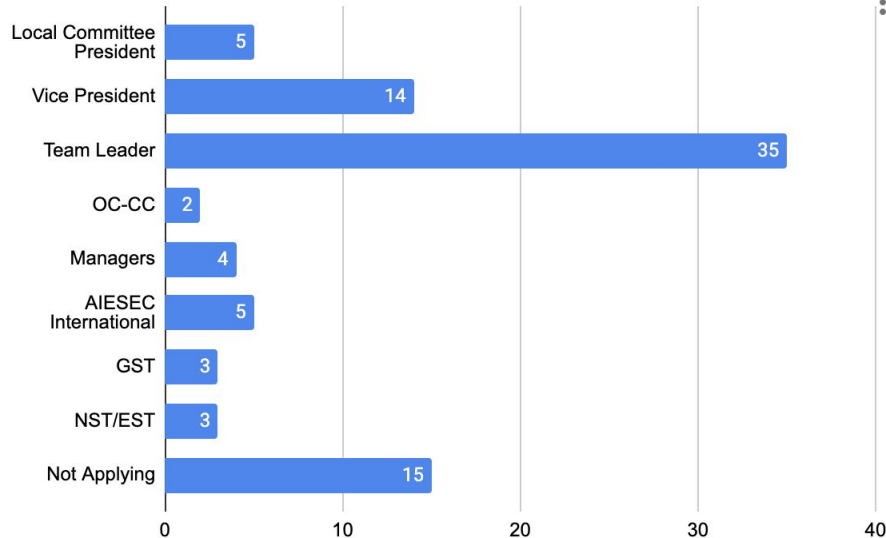

April 2024

Would you be applying to occupy higher roles in AIESEC?

1. Applying: 54
2. Not Sure/Confused: 36
3. Not Applying: 9

Some of the membership is uncertain about applying to higher roles, for which we will try to gauge the reason and provide support and for the individuals who are interested in applying to higher roles. For them, there will be more focus on leadership-oriented sessions as well as an increased frequency of direct touchpoints with people in different leadership positions. There are some who are clear about their decision about not continuing for which we will try to gauge the reason and map their experience.

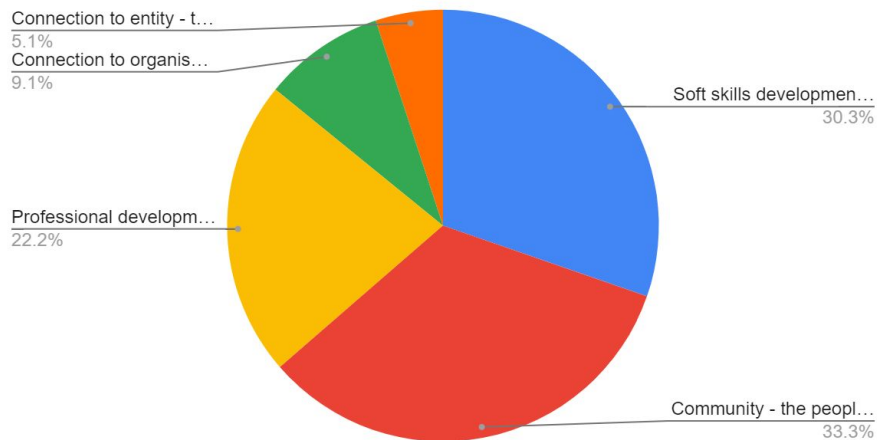

which leadership role is the membership most interested in?

1. TL & Manager - 39
2. VP - 14

Clearly, the membership is most inclined towards applying for the managing body of the next semester (TL+Managers). This indicates the need of capacity building for the future MB as well as nurturing EB pipeline. However, we need to also keep focus on the number of people not getting into said positions but finding value in the organisation in order to promote the true essence of AIESEC as a leadership development LEADERSHIP ROLES organisation.

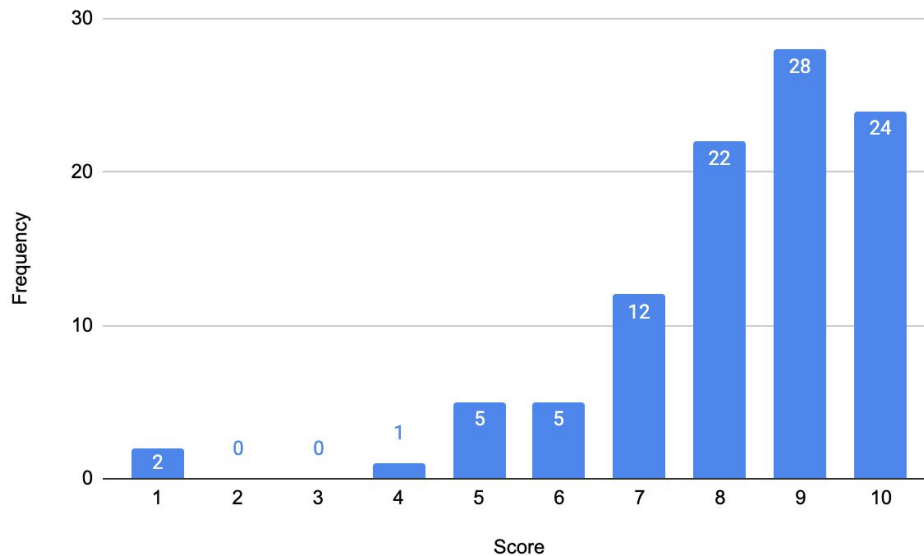

Count of Which of the following is your TOP motivator for staying in AIESEC?

If yes, what is the reason that is making you stay back?

1. 33% of the membership are staying in AIESEC for the community and the people. We should focus on community building spaces and focusing on providing a sense of belongingness in the community.
2. 30% of the membership is here for soft skills development which means we should conduct workshops on soft skills.

LEADERSHIP PROMOTER SCORE: **8.21**

On a scale of 1-10, how well would you recommend AIESEC as a leadership platform to your friends and colleagues

1. 9-10 - 52

2. 7-8 - 34

3. 1-6 - 13

The current average LPS stands at 8.21

The people giving scores 1-6 stands at 13 indicating detractors and scores ranging from 7-8 (passive scores) comprise 34 people of the membership.

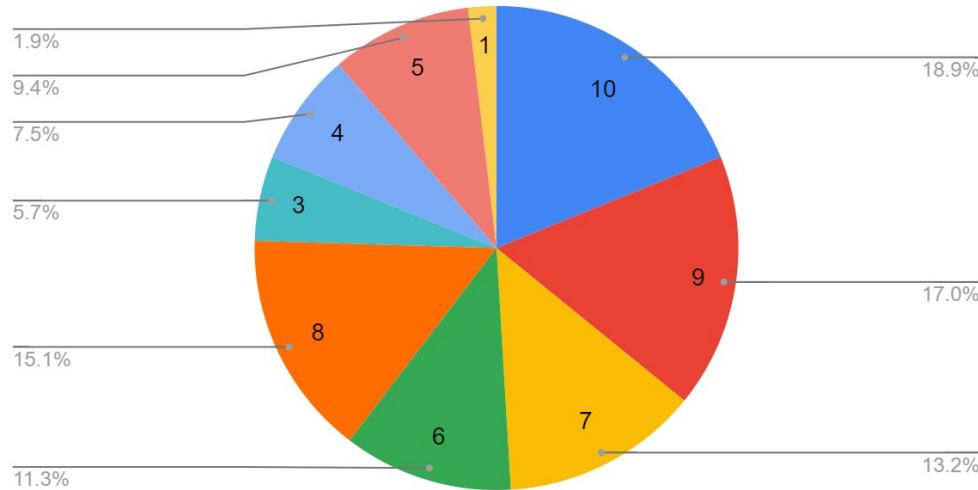

Effectively, AIESEC, as recommended by the membership, is a great leadership platform

TOTAL PERCENTAGE [JOB DESIGN AND JOB SUPPORT]: 82.1%

On a scale of 1-10, how satisfied are you with the clarity about your job role?

INFERENCES:

The majority of respondents (64.2% combining ratings 7-10) are satisfied to very satisfied with the clarity of their job role.

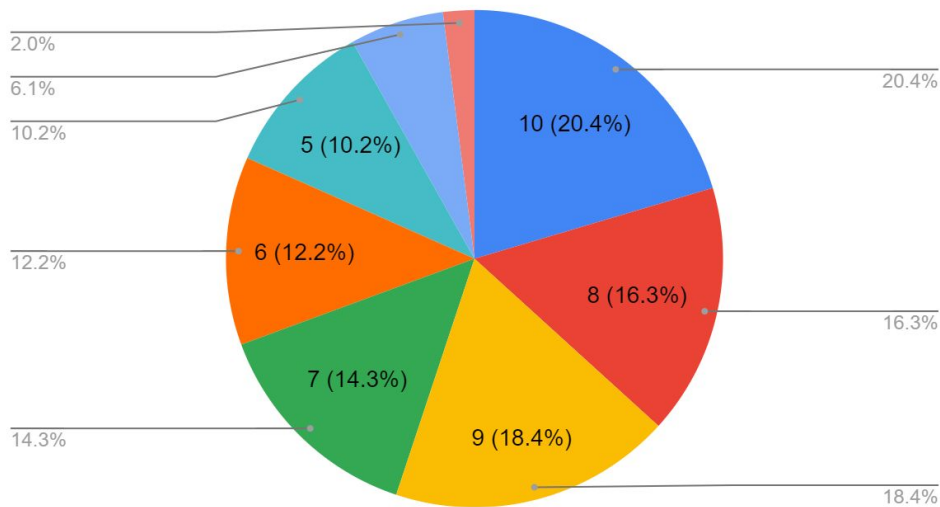

A significant proportion (26.4% combining ratings 4-6) fall in the middle range, indicating a mix of neutral feelings and mild satisfaction or dissatisfaction.

A small portion of the respondents (8.6% combining ratings 1-3) express dissatisfaction with the clarity of their job role, with very few (1%) being extremely dissatisfied.

This indicates that while most people are clear about their job role, there is a minority that could benefit from more information or communication regarding their duties and expectations at work. It might be helpful for the organization to investigate why some employees are dissatisfied and find ways to improve clarity for these individuals.

TOTAL PERCENTAGE [WORKPLACE AND ENVIRONMENT AND WELLBEING]: 82.5%

Environment and Well Being

INFERENCES:

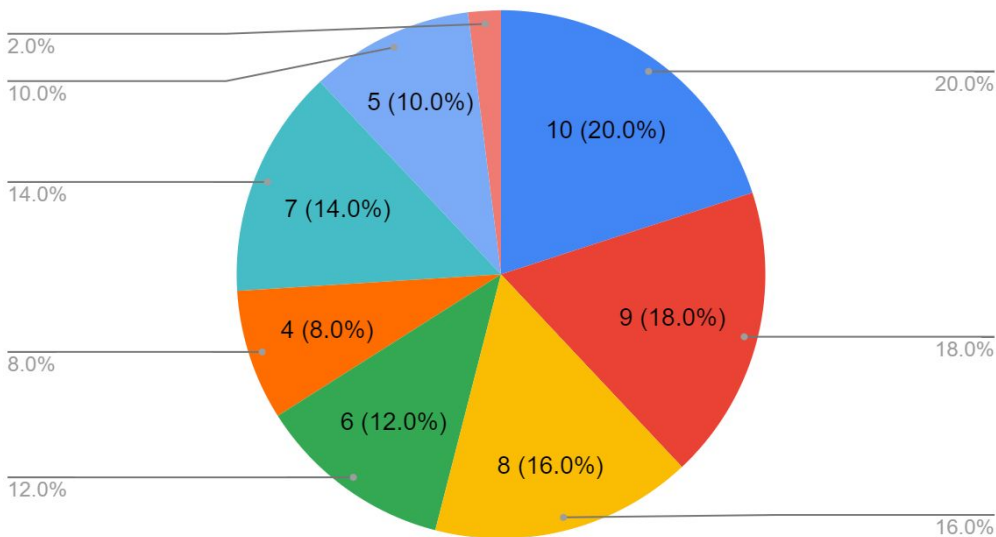

A majority of respondents (69.4% combining ratings 8-10) seem to have a positive perception of the environment and well-being aspect being surveyed. A smaller, but notable proportion of the participants (36.7% combining ratings 5-7) have given middle-range ratings, indicating they feel there are areas that could be improved.

Very few respondents (approximately 18.3% combining ratings 1-4) have rated the environment and well-being aspect poorly, suggesting there are specific concerns or issues that a minority of the group is facing.

Overall, the data seems to reflect a generally positive sentiment towards environment and well-being among the survey participants, with the majority giving ratings on the higher end of the scale. However, there is a spectrum of satisfaction levels, and those on the lower end could provide insights into areas needing attention or improvement.

TOTAL PERCENTAGE [COMMUNITY AND COMMUNITY ENGAGEMENT]: 85.8%

Community Engagement

INFERENCES:

The majority of the respondents (70.0% from ratings 7 to 10) seem to have a positive level of engagement in their community.

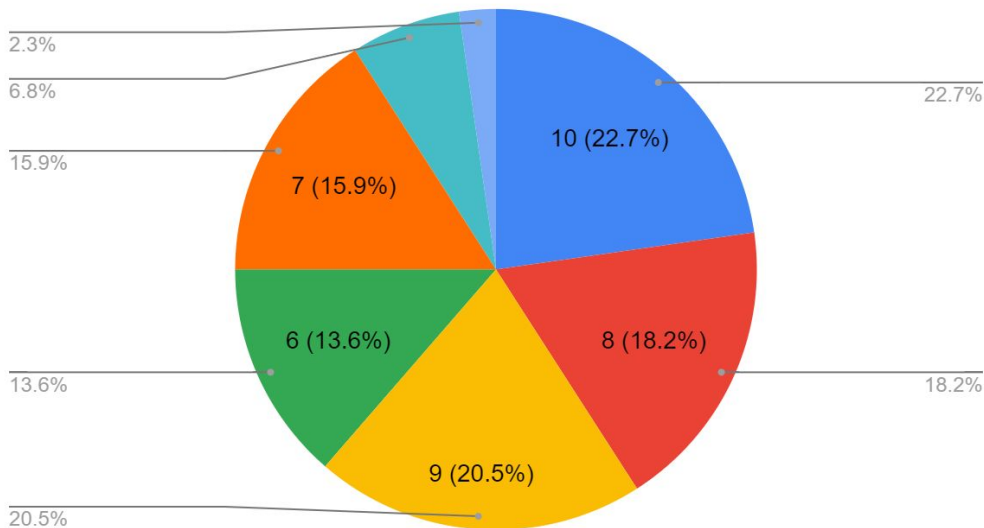

A significant portion of the respondents (30.0% from ratings 4 to 6) have moderate to neutral feelings about their community engagement, indicating potential areas for improvement.

A very small minority (represented by the remaining 2.0%) feel very little engagement with their community, which could be due to a variety of factors that might need to be addressed by community leaders.

The overall inference is that community engagement is quite high among respondents, but there is a notable segment that could be targeted for increased involvement or support. Community organizers might focus on the concerns or barriers of those with lower engagement scores to enhance overall community participation.

TOTAL PERCENTAGE [COMMUNITY AND COMMUNITY ENGAGEMENT]: 84.8%

Community

INFERENCES:

A strong majority of respondents (77.4% combining ratings 7 to 10) feel positively about their level of engagement in the community.

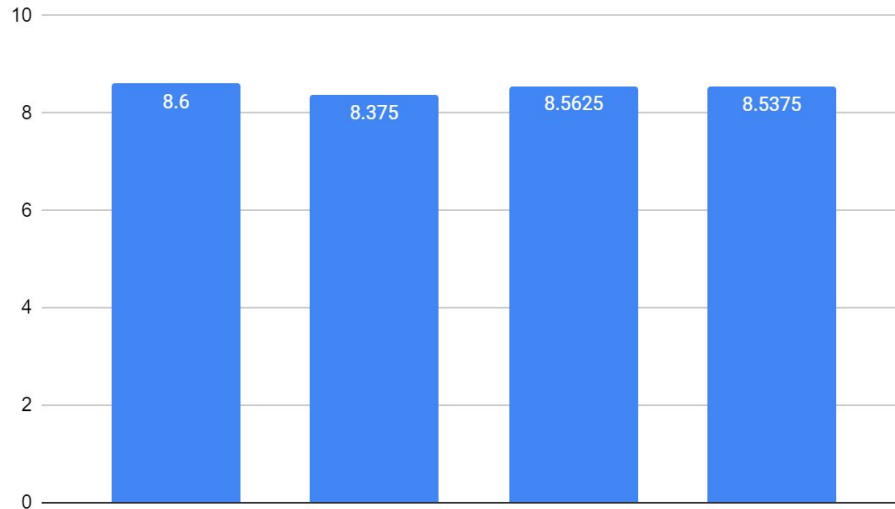

There appears to be a relatively small proportion of respondents who are moderately satisfied (ratings 6 and below), which could represent a minority that might require additional outreach or support to improve their satisfaction with community engagement.

The very low percentage of respondents who chose the lowest ratings (a combined 9.1% for ratings 1 through 5, with only 2.3% selecting the lowest rating) indicates that very few participants are outright dissatisfied with community engagement.

Overall, this data suggests that the community in question has a high level of engagement satisfaction among its members, with opportunities to further enhance engagement for those who have given moderate ratings.

TOTAL PERCENTAGE [TEAM PRACTICES]: 85.18%

Team Practises

INFERENCES:

All scores are above 8 out of a maximum of 10, which indicates a high level of approval or effectiveness for the team practices being assessed.

The scores are very close to one another, with the smallest value at 8.375 and the highest at 8.5375. This small range suggests a consistent assessment of the team practices across different criteria or by different evaluators.

None of the practices have perfect scores, which implies that while the team's practices are highly regarded, there is still room for improvement.

The team practices are overall very effective, as indicated by the high scores.

Consistency in high scores can reflect a well-established and understood set of practices within the team.

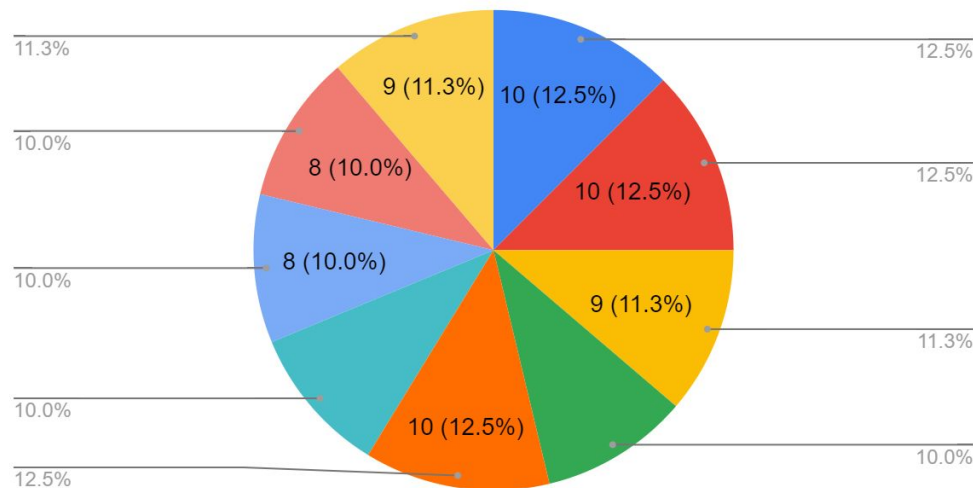

Considering the high scores across the board, the focus for this team might be on fine-tuning practices to push towards even greater excellence.

TEAM LEADERS

TOTAL PERCENTAGE [JOB DESIGN AND JOB SUPPORT]: 88.8%

On a scale of 1-10, how satisfied are you with the clarity about your job role?

INFERENCES:

There is a high level of satisfaction among respondents regarding the clarity of their job roles, as the lowest score shown is 8.

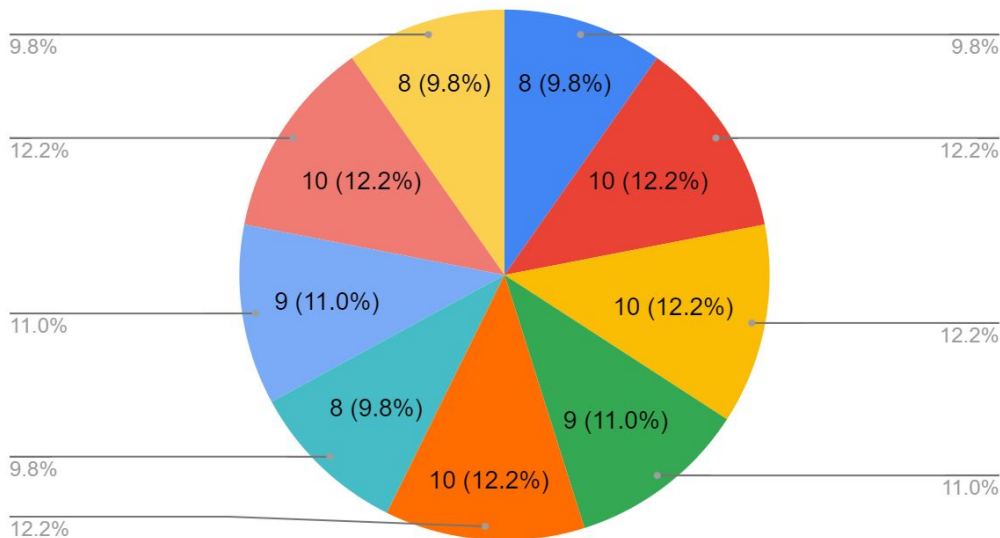

The even distribution of responses from 8 to 10 could indicate a general consensus of clear understanding or well-defined job roles within the organization or group surveyed.

Since the responses do not show ratings below 8, we cannot see the level of dissatisfaction, if any, among the rest of the respondents.

This positive distribution suggests that the organization might be doing well in communicating job roles clearly, but the absence of lower scores prevents a complete analysis of the overall sentiment. For a comprehensive understanding, insights into the full range of scores would be necessary.

TOTAL PERCENTAGE [WORKPLACE AND ENVIRONMENT AND WELLBEING]: 9.11%

Environment and Well Being

INFERENCES:

There is a high overall level of satisfaction among respondents regarding their environment and well-being, as the lowest rating shown is 8.

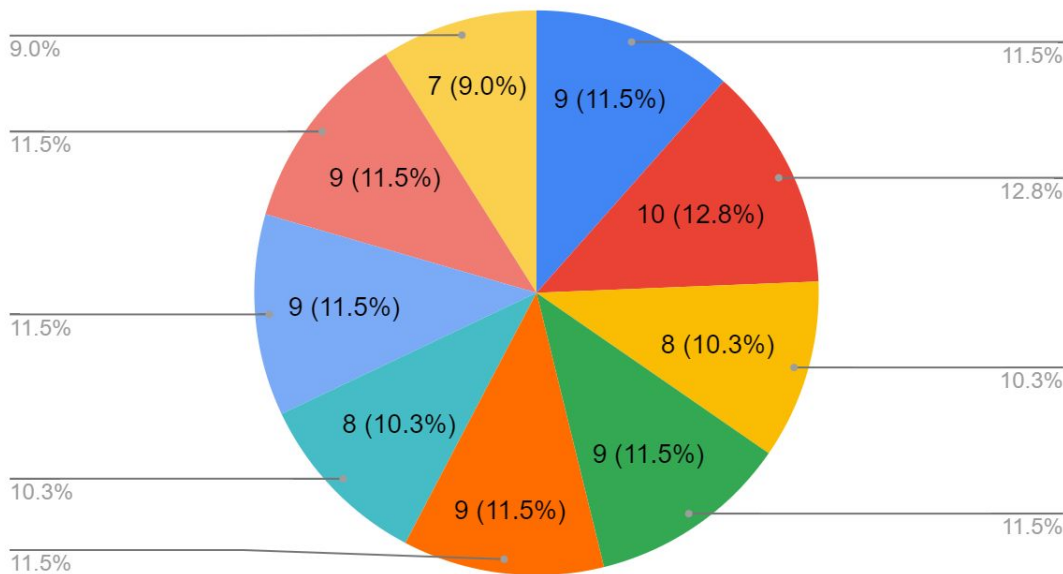

The even distribution of the ratings, particularly the high percentage of '10s', suggests that a large portion of respondents are highly satisfied with their environment and well-being.

The absence of ratings below 8 prevents analysis of any dissatisfaction levels, suggesting that the displayed data only includes the top end of the satisfaction scale.

It can be concluded that among the survey respondents whose data is shown, the sentiment towards their environment and well-being is quite positive.

TOTAL PERCENTAGE [COMMUNITY AND COMMUNITY ENGAGEMENT]: 86.6%

Community Engagement

INFERENCES:

A significant majority of the respondents feel positively about their level of community engagement, with the majority (58.8%) rating their satisfaction as a '9' or '10'.

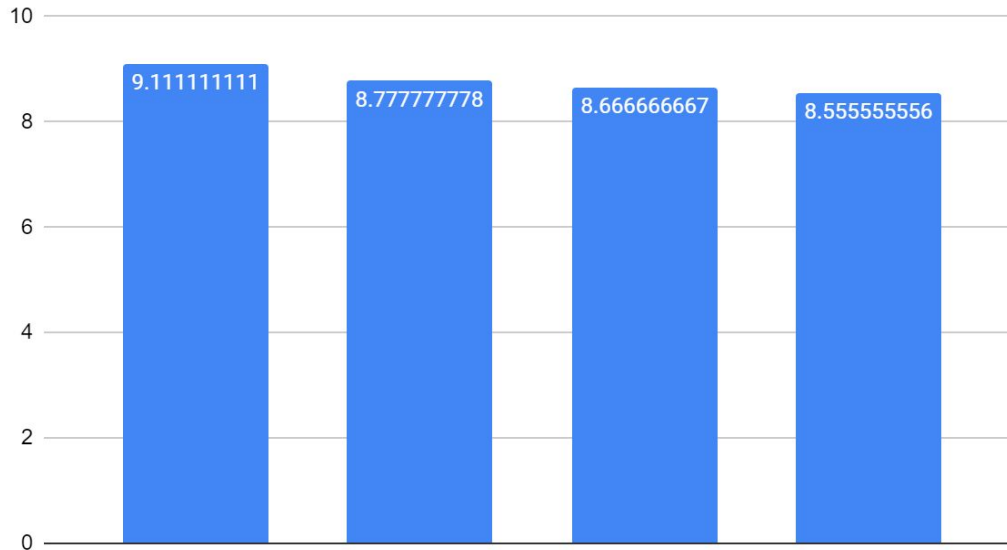

The overall distribution of responses suggests a generally high level of community engagement satisfaction among the participants.

The existence of a 9.0% segment for the rating '7' does hint at a minority of respondents who are less satisfied than others, suggesting there might be specific areas where community engagement could be improved.

This data implies that while most respondents feel good about their community engagement, there is a small group that could potentially benefit from increased engagement opportunities or support.

TOTAL PERCENTAGE [TEAM PRACTICES]: 87.7%

Team Practices

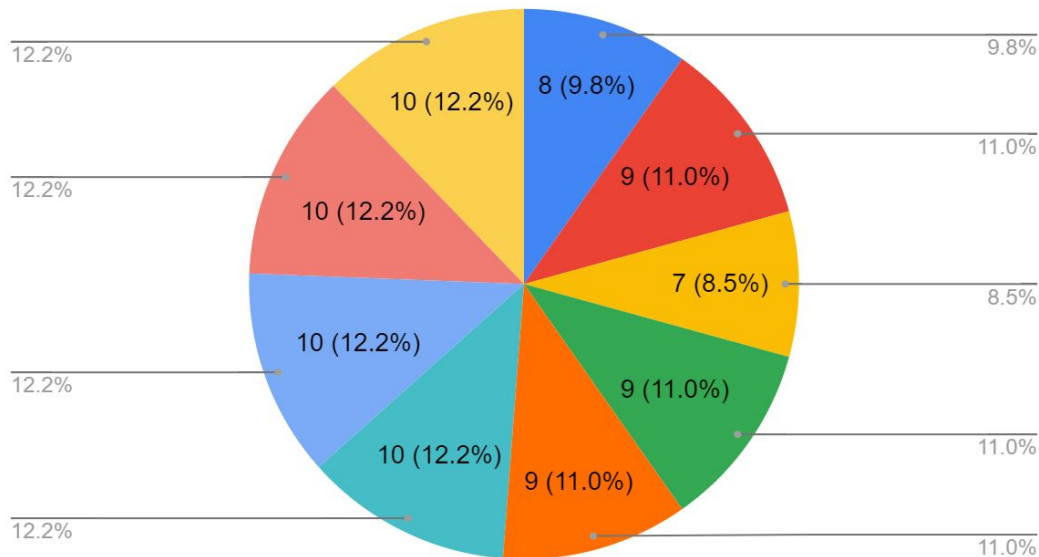

All practices are rated quite high, which is indicative of a well-functioning team environment. The close range of scores suggests a balanced approach to team management, but with a slight emphasis on team building, which is seen as the most positive aspect. The team is likely to benefit from any initiatives that aim to strengthen the areas of engagement, performance, and development, even though these areas are already viewed positively. Despite the lower scores for performance and development, there is no indication of any significant issues, as all scores are above 8.5, showing a healthy team dynamic overall.

MEMBERSHIP EXPERIENCE **STANDARDS**

VICE-PRESIDENTS

TOTAL PERCENTAGE [JOB DESIGN AND JOB SUPPORT]: 91.1%

Job Role

INFERENCES:

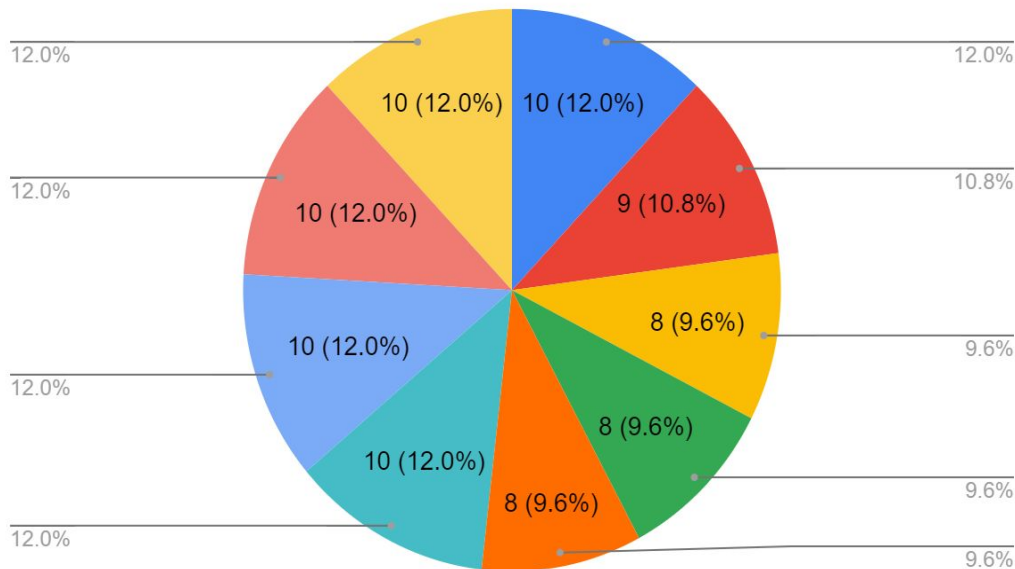

The overall clarity about job roles among respondents is high, with the majority rating their clarity at 9 or 10.

Since the ratings are on the high end, it suggests that the respondents generally understand their job roles well.

The small portion that rated their job role clarity at 7 may indicate specific areas where additional communication or clarification could be beneficial. It's important to note that the pie chart does not show ratings below 7, so we cannot gauge the level of dissatisfaction or lack of clarity for those respondents, if any.

TOTAL PERCENTAGE [WORKPLACE AND ENVIRONMENT AND WELLBEING]: 92.2%

Workplace Environment and Wellbeing

INFERENCES:

The overall satisfaction with the workplace environment and wellbeing is quite high among the respondents, as the ratings are on the higher end of the scale.

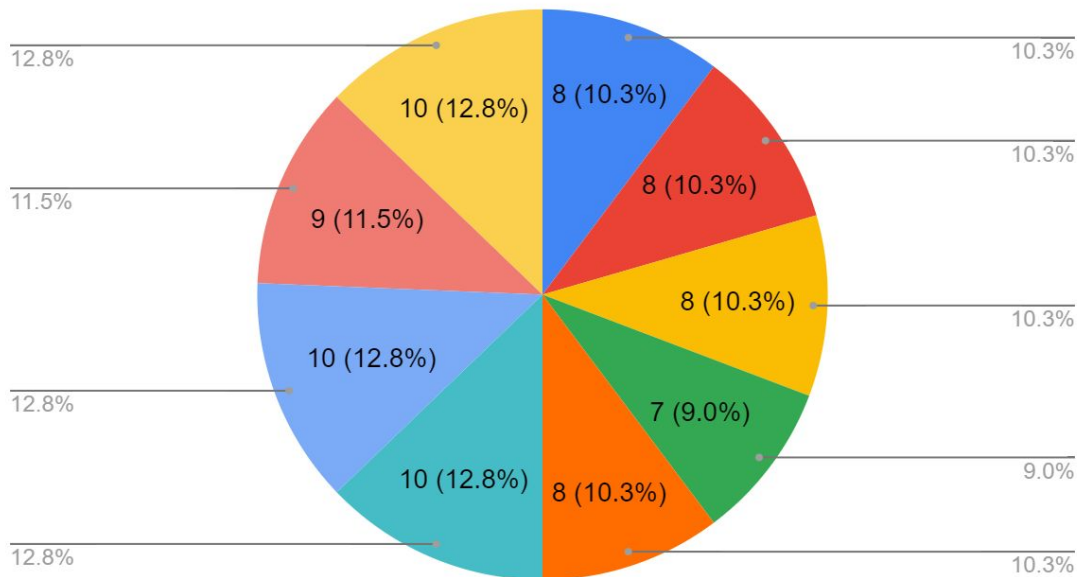

The majority of the participants are highly satisfied (those who rated 9 or 10), with no visible segments indicating any ratings below 8.

The fact that no lower ratings are visible suggests that the pie chart only includes the top end of the satisfaction scale.

Given the high ratings throughout, the data indicates a generally positive sentiment towards the workplace environment and wellbeing among the survey participants.

TOTAL PERCENTAGE [COMMUNITY AND COMMUNITY ENGAGEMENT]: 86.6%

Community and Community Engagement

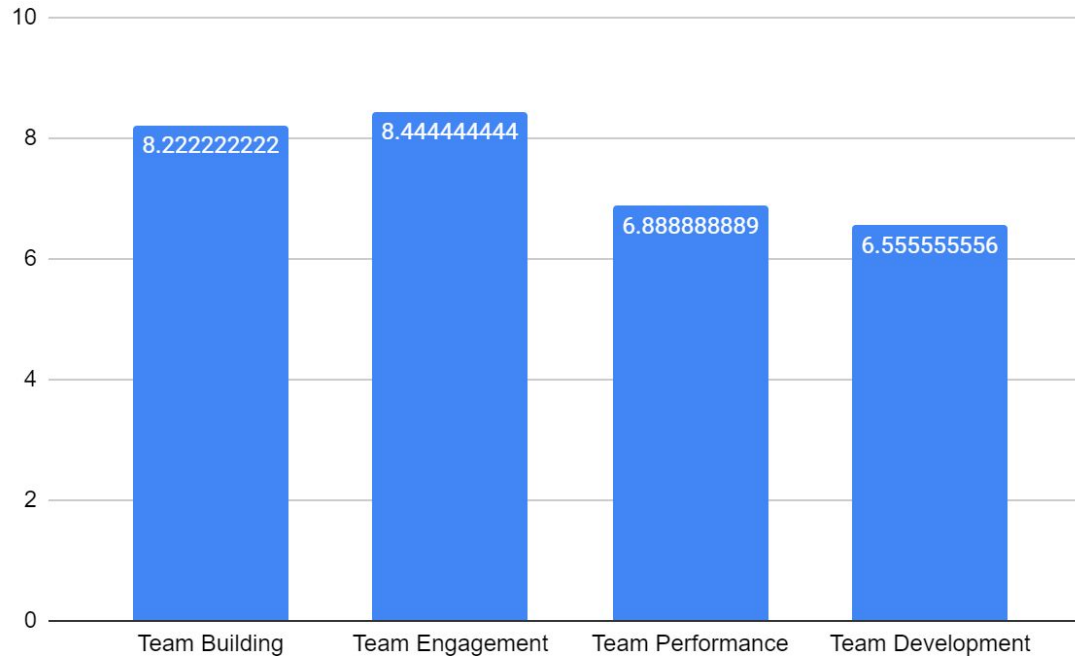

INFERENCES:

A majority of respondents are highly satisfied with community and engagement (those who rated 9 or 10), pointing to a strong sense of connection or positive interaction within their community.

The distribution shows a gradient of satisfaction with a tilt towards the higher end, suggesting overall positive engagement in the community. Even the lowest rating (7) is still relatively high, implying that while there might be specific areas needing attention, the general sentiment is positive.

TOTAL PERCENTAGE [TEAM PRACTICES]: 75.2%

INFERENCES:

The team seems to excel in engagement, which is a strong indicator of motivation and commitment.

Performance and development have lower scores, which might highlight potential areas where the team feels improvements are necessary.

Even though team performance and development have lower ratings, they are still above 6, suggesting that the situation is not critical but could benefit from attention.

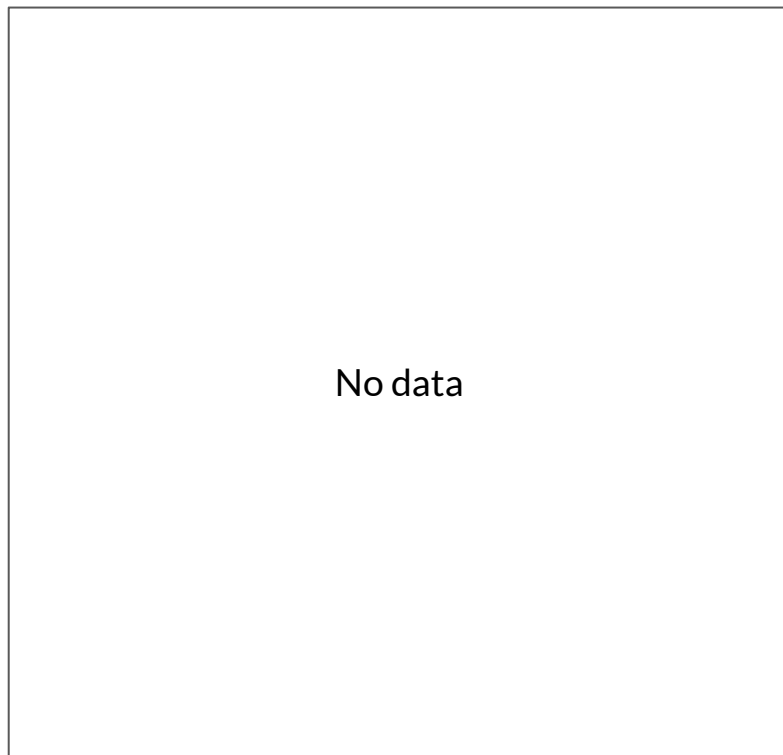

The differences in scores could guide management on where to focus their development efforts to achieve a more balanced and effective team dynamic.

OVER-ALL

TOTAL PERCENTAGE [JOB DESIGN AND JOB SUPPORT]: 82.1%

Job Role

INFERENCES:

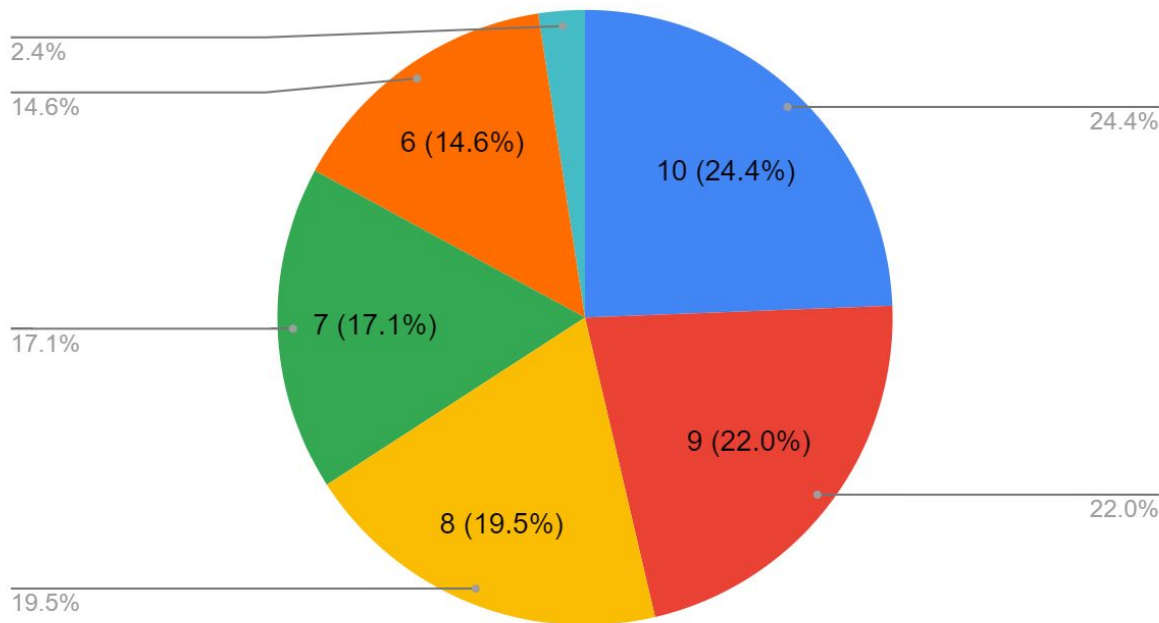

The majority of respondents (64.2% combined from ratings 7-10) seem satisfied with the clarity of their job roles, which is a positive indicator of communication within the organization.

A significant proportion of respondents (26.4% combined from ratings 4-6) feel neutral or have mild concerns about their job role clarity.

A smaller portion of the respondents (8.6% combined from ratings 1-3) express dissatisfaction with the clarity of their job role, highlighting an area for potential improvement in communication or job role definition.

TOTAL PERCENTAGE [WORKPLACE AND ENVIRONMENT AND WELLBEING]: 90.8%

Work environment and well being

INFERENCES:

Most respondents (83.0% combined from ratings 8 to 10) feel positive about their work environment and well-being.

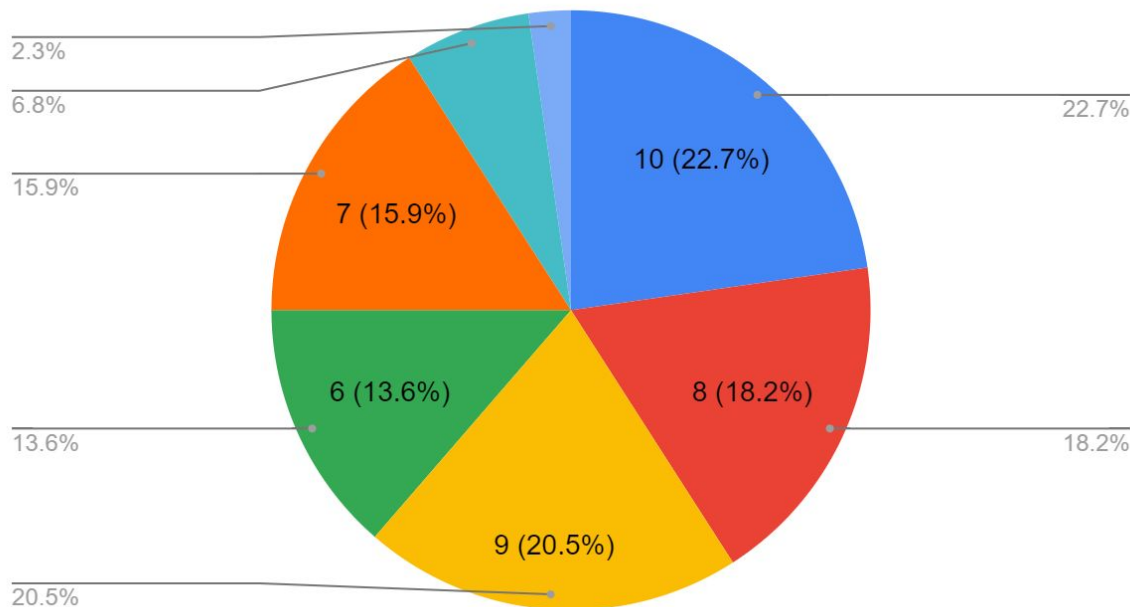

The overall sentiment is skewed towards higher satisfaction, with the majority of responses being 8 and above.

The smaller percentage for rating '6' indicates that there are some employees who are less satisfied, pointing towards areas where the work environment or well-being initiatives could potentially be improved.

The absence of ratings below 6 prevents a full understanding of the lower end of the satisfaction spectrum.

TOTAL PERCENTAGE [COMMUNITY AND COMMUNITY ENGAGEMENT]: 85.6%

Community Engagement

INFERENCES:

Most respondents (61.4% combined from ratings 8 to 10) indicate a high level of community engagement.

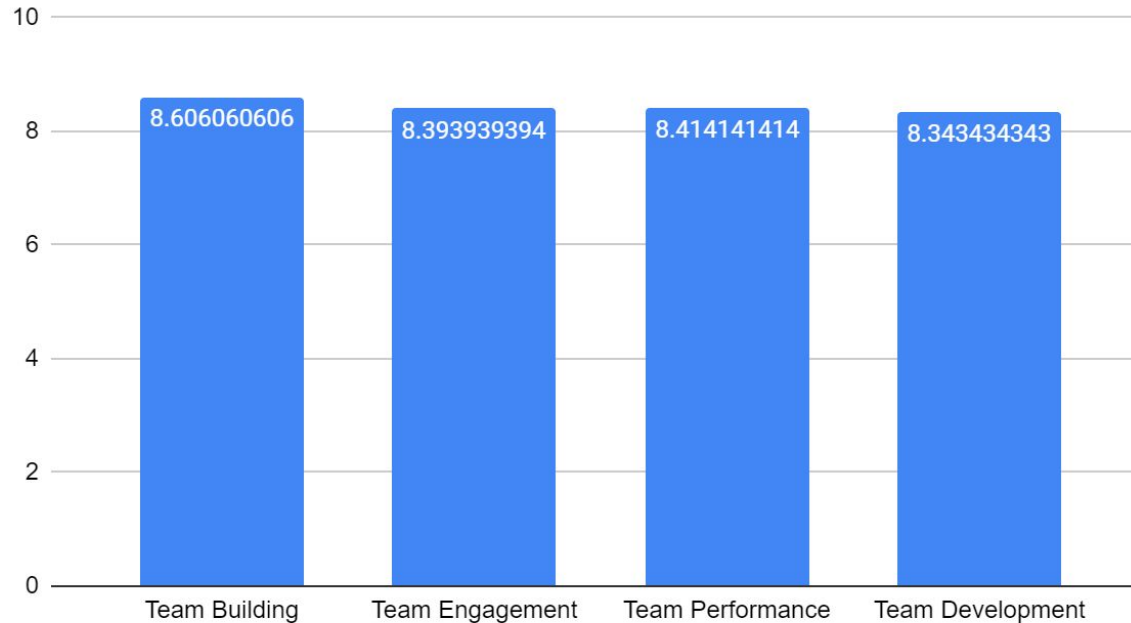

There is a progressive decline in engagement as the ratings decrease, but even the lowest depicted rating (6) is above the midpoint of the scale, suggesting a moderate level of engagement.

The distribution of responses is skewed toward the higher end of the scale, which could suggest effective community involvement or a strong sense of community among the respondents.

The chart suggests that community engagement is generally good, with the majority of respondents feeling positively engaged.

TOTAL PERCENTAGE [TEAM PRACTICES]: 84.3%

Team Practices

INFERENCES:

Overall, the ratings for all four aspects are quite close, which suggests a well-rounded team environment where all areas are receiving attention.

Despite the positive ratings, there is a slight range between the highest and lowest scores, which could indicate specific areas where the team feels improvements could be made.

Since all aspects have high ratings, it can be inferred that the team is functioning well, with team members feeling engaged, productive, and supported in their development.
